curcumin (2compartment)

Dose: 0.2 mg/kg  
Route: iv  
Reference: 192  
Media: plasma  
LOQ: 0.00036

The plot shows the decay of plasma concentration over time. The y-axis is logarithmic, with major ticks at 0.0001, 0.001, 0.01, and 0.1 mg/L. The x-axis is linear, ranging from 0 to 100 hours. Data points are green circles, and a green line represents the fitted decay. A dashed blue line indicates the LOQ at 0.00036 mg/L.
