The figure consists of two side-by-side line graphs. The left graph is titled '1 mg/kg iv' and the right graph is titled '5 mg/kg po'. Both graphs have 'Time (h)' on the x-axis, ranging from 0 to 75 hours with major ticks every 25 hours. The y-axis represents plasma concentration in mg/kg, with a scale from 0 to 192 mg/kg. Both graphs show a rapid decline in concentration over time, with the 5 mg/kg po dosage showing a higher peak concentration than the 1 mg/kg iv dosage. The data points are connected by lines, and the concentration drops to near zero by 25 hours in both cases.

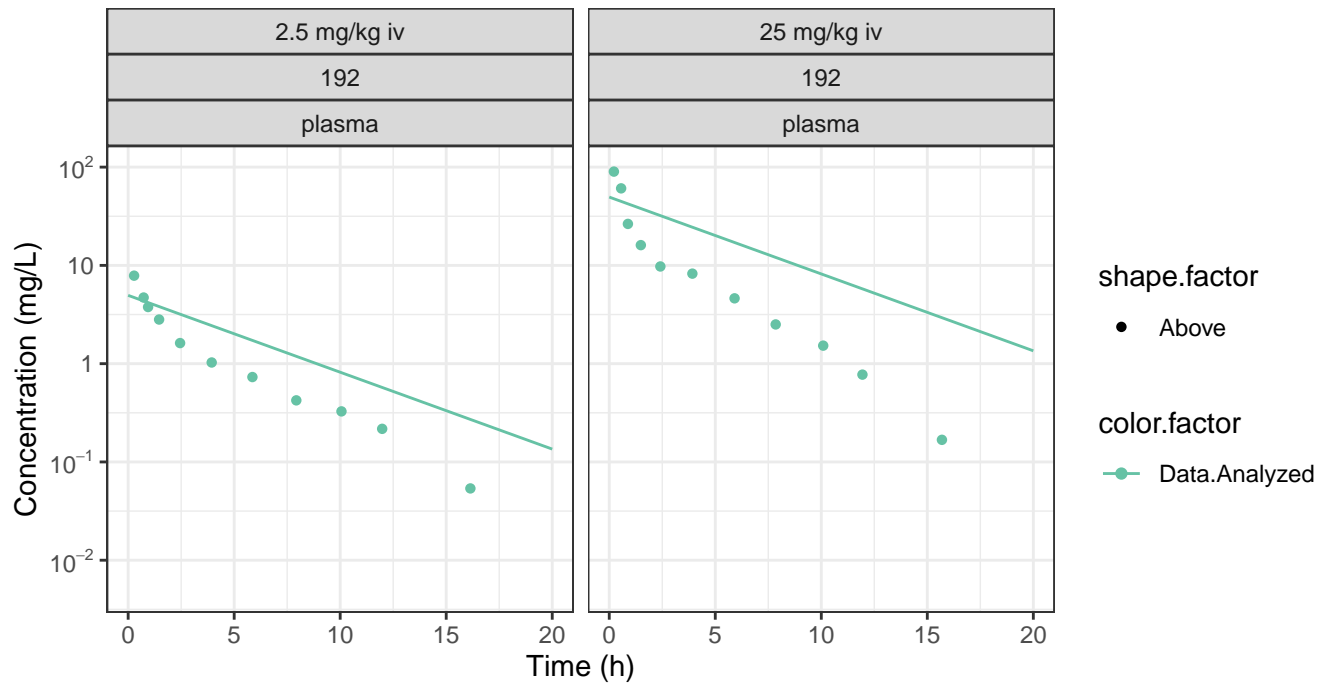

Figure 1 is a line graph showing the plasma concentration of 1 mg/kg iv 192 over time. The y-axis is labeled '1 mg/kg iv', '192', and 'plasma'. The x-axis is labeled 'Time' with major ticks at 0, 25, 50, and 75. The graph displays a series of green data points representing plasma concentration at various time intervals. A solid green line represents a fitted curve that shows a rapid decline in concentration from approximately 10 units at time 0 to near zero by time 25. The data points are as follows:
